Meta Platforms has built a prototype humanoid with Chinese robotics company Fourier and is already working on a second version, as the social media giant steps up eorts to develop robots for people's homes, according to people familiar with the initiative.
据了解该计划的人士透露，Meta 平台已与中国机器人公司 Fourier 共同打造出了一个人形机器人原型，目前还在研发第二代产品。随着这家社交媒体巨头加大力度开发可用于家庭环境的机器人，相关工作也在不断推进中。
Meta and Fourier built the roughly 106-pound humanoid, known internally as Max, in just three months. The goal was to help Meta develop a more polished future product at its robotics arm that it could eventually release as a product, one of the people said, adding that no launch target had been set.
Meta 和 Fourier 仅用三个月时间就制造出了这个重量约为 106 磅的人形机器人，内部将其命名为 Max。据其中一位人士透露，这样做的目的是帮助 Meta 的机器人部门开发出更完善的未来产品，最终将其推向市场；不过目前还没有设定具体的上市时间。
While it's still a relatively early step, the prototype represents the most concrete progress in Meta's robotics aspirations since it launched Meta Robotics Studio early last year and tapped the former chief executive of General Motors' autonomous vehicle unit, Cruise, to run it. Meta has also focused on the software side of robotics, in May acquiring Assured Robot Intelligence, a startup that developed AI models for training robots to understand and adapt to human behavior in dierent environments.
虽然这还只是初步阶段，但这一原型机代表了自去年初 Meta 推出 Meta Robotics Studio 以来，在机器人技术发展方面取得的最实质性的进展。当时，Meta 还聘请了通用汽车自动驾驶业务部门 Cruise 的前首席执行官来负责该项目的管理。此外，Meta 还注重机器人技术的软件层面，于 5 月收购了 Assured Robot Intelligence 这家初创公司，该公司致力于开发人工智能模型，帮助机器

人理解并适应不同环境中的人类行为。
Meta’s ambition to develop consumer robots that can help with housework and everyday tasks has taken on new urgency with the launch of the company’s consumer-focused AI agent, Muse. Chief Technology Ocer Andrew Bosworth has described humanoid robots internally as a physical embodiment of Muse, the knowledgeable people said.
随着该公司专为消费者设计的 AI 助手 Muse 的推出，Meta 开发能够协助处理家务及日常事务的家用机器人的目标变得更加紧迫。据知情人士透露，首席技术官安德鲁·博斯沃思将类人机器人视为 Muse 的实体化表现形式。
Building Max required Meta’s team to travel to China to work closely with Fourier . Meta’s vice president of product for robotics, Li-Chen Miller , spent almost two months at Fourier’s factory in Shanghai to collaborate on the prototype, two of the people said. That trip culminated in an in-person demonstration of Max to some employees at the end of August as part of an internal robotics summit, those people said.
为了开发 Max，Meta 的团队不得不前往中国，与 Fourier 公司紧密合作。据相关人士透露，Meta 的机器人产品副总裁李陈·米勒在上海的 Fourier 工厂里花了近两个月的时间来共同研发原型机。这些人士还表示，8 月底，在一次内部机器人技术研讨会上，Max 终于得以向部分员工进行现场演示。
The partnership comes as the Trump administration has stepped up scrutiny of China’s robotics sector—which dominates global production—and raised questions about the national security implications of U.S. companies relying on Chinese rms for parts. In July, the Federal Communications Commission barred imports of new models of Chinese humanoid robots, citing potential supply chain and cybersecurity risks.
在特朗普政府加紧审查占据全球生产份额的中国机器人产业的同时，这类合作伙伴关系的出现也引发了人们对于美国企业依赖中国厂商提供零部件所带来的国家安全问题的担忧。7 月，美国联邦通信委员会以供应链和网络安全风险为由，禁止进口中国制造的新型人形机器人。
Under existing FCC import rules, companies can import up to 4,000 units of devices for testing or product development, provided they are not marketed or sold. That exemption allows U.S. companies including Meta to bring in prototypes from China for research and development purposes.
根据现行的 FCC 进口规定，只要这些设备不用于销售，企业最多可以进口 4,000 台用于测试或产品开发。这一规定使得包括 Meta 在内的美国企业能够从中国进口原型机，用于研发工作。

But in August the FCC proposed lowering that threshold to just 40 units for devices covered by its restrictions, unless companies obtain written approval from the agency to import more. The proposal could make it harder for Meta and other companies to bring batches of prototypes into the U.S. for testing and development, and dicult to obtain a steady supply of parts to build robots for sale.
但在 8 月，FCC 提议将相关限制所涵盖的设备的数量标准降至 40 台，除非这些公司能获得该机构的书面许可才能进口更多设备。这一提议将使 Meta 等公司更难将原型机运往美国进行测试和开发，同时也难以获得足够的零部件来制造可供销售的机器人。
A spokesperson for Meta said: “We face the same realities as the rest of the industry when it comes to sourcing components that are not readily available domestically. However , this eort with Fourier is focused on internal research and experimentation, and we have no plans to sell these units.”
Meta 的发言人表示：“在获取那些国内无法轻易获得的组件方面，我们面临着与业内其他公司相同的挑战。不过，我们与 Fourier 的合作仅限于内部研究和实验，我们并没有出售这些产品的计划。”
Sti Competition in Humanoid Robotics
人形机器人领域的激烈竞争
If Meta does end up trying to sell humanoids to consumers, it would face sti competition. Chinese companies are already producing such robots at scale, and Elon Musk is heavily betting the future of his electric vehicle company, Tesla, on its Optimus humanoid robot, now in its third version. In addition, prominent startups including Figure and 1X Technologies have been working on humanoids for years.
如果 Meta 真的试图向消费者出售类人机器人，它将面临激烈的竞争。中国企业已经能够大规模生产这类机器人，而埃隆·马斯克则将旗下电动汽车公司特斯拉的未来寄希望于其 Optimus 类人机器人——该机器人目前已是第三代产品。此外，Figure 和 1X Technologies 等知名初创企业也多年来一直在研发类人机器人。
Despite the buzz surrounding humanoids, consumer adoption within homes is still in its early days. Figure has begun testing its robots in home environments, while 1X has started taking pre-orders for its NEO robots.
尽管关于类人机器人的讨论层出不穷，但它们在家庭中的实际应用仍处于初期阶段。Figure 公司已经开始在家庭环境中测试其机器人，而 1X 公司则已开始接受其 NEO 机器人的预购订单。
The Meta robotics division has recently undergone a leadership change. Meta tapped Ning Li to serve as interim leader of Meta Robotics Studio after Marc Whitten, the

former Cruise CEO, left the company at the end of August, just 18 months after joining, according to two people familiar with the matter . Li reports to Bosworth, who has taken over Whitten's former responsibilities and has been closely involved in Meta Robotics Studio, one person said. Bosworth has held regular meetings with the team and spent time digging into the division's technical and operational challenges, the person said.
据两位知情人士透露，由于前 Cruise 首席执行官马克·惠滕在入职仅 18 个月后于 8 月底离开公司，Meta 机器人部门近期发生了领导层变动。Meta 任命宁莉担任 Meta 机器人工作室的临时负责人。另一位人士称，宁莉向博斯沃思汇报工作，而博斯沃思则接过了惠滕之前的职责，并一直密切关注着 Meta 机器人工作室的发展情况。该人士还表示，博斯沃思会定期与团队开会，同时深入研究该部门在技术及运营方面面临的挑战。
Max, which stands about 1.5 meters tall, or just under 5 feet, is currently powered by Nvidia's Jetson Thor chip and a separate software platform that helps it move. It has two speakers built into its chest, and the eyes and mouth on its face can mimic human expressions. Its ve-ngered hands can pick up small bottles and toys.
Max 的身高约为 1.5 米，即不到 5 英尺。它由 Nvidia 的 Jetson Thor 芯片以及专门的软件平台驱动，这些组件帮助它移动。它的胸部内置有两个扬声器，而脸上的眼睛和嘴巴则可以模仿人类的表情。它那有五根手指的手能够拿起小瓶子或玩具。
Meta built its custom robot using Fourier's hardware and insights from the rst, second and third generations of its series of robots. The companies then increased the prototype's height, changed its proportions and altered its head design, display and cameras, while adding hands and shoes.
Meta 利用傅里叶的硬件，以及其系列机器人第一代、第二代和第三代产品所积累的经验，打造出了这款定制机器人。随后，该公司又提高了该原型机器人的高度，调整了其比例，改变了其头部设计、显示屏及摄像头的外观，同时还为它添加了手和脚。
Meta also laid out specic requirements for how the robot should perceive and respond to people in a home environment. The two companies designed Max based on several requirements from Meta, including the ability to recognize a voice from 5 meters away, interpret a hand gesture or wave from 3 meters away, hold eye contact, and signal various states such as listening, thinking, speaking and uncertainty.
Meta 还规定了机器人在家中环境中应如何感知他人以及如何作出反应的具体要求。这两家公司根据 Meta 的这些要求设计了 Max，其中包括：能够在 5 米外识别声音、

在 3 米外理解手势或挥手动作、保持眼神交流，以及表达出正在倾听、思考、说话或犹豫等不同状态。
Meta and Fourier started building Max 2 in September . It will include a redesigned torso and reworked hands with better manipulation skills, as well as a projector to display visual content, the people said. It will also have additional sensors to help it go up and down stairs.
据相关人员透露，Meta 和 Fourier 从 9 月开始着手开发 Max 2。这款机器人将拥有经过重新设计的躯干以及功能更强的手部，从而具备更好的操作能力；同时还会配备用于显示视觉内容的投影仪。此外，它还将装有额外的传感器，以帮助其上下楼梯。
Meta is also building out the team it may need to eventually manufacture robots in large numbers. The company is looking to hire a supplier development engineer in Shanghai to work with product design and manufacturing and help scale robotics “from prototype through mass production,” according to a job posting viewed by The Information. Meta is also hiring a product design engineer and a technical program manager for Meta Robotics Studio in Shenzhen, China, to oversee prototype development, planning and mass production, according to two other job postings.
据《The Information》看到的招聘信息显示，Meta 还在组建团队，为将来大规模生产机器人做准备。该公司希望在上海招募一名供应商开发工程师，负责产品设计与制造工作，协助将机器人产品从原型阶段推进到大规模生产阶段。另外，根据其他两则招聘信息，Meta 还在中国深圳的 Meta Robotics Studio 招募产品设计工程师和技术项目经理，负责监督原型的开发、规划以及大规模生产工作。
